

**How library systems
influence the
interlibrary loan
workflow: a
comparison between
Alma and Koha**

**Veronica Fors (Örebro
University Library)
Martina Kassler (Karlstad
University Library)**

Outline of the presentation

Introduction

- Örebro and Karlstad University libraries recently acquired and implemented new library systems, Örebro – Alma, a proprietary system and Karlstad – Koha, an open source system
- Interlibrary loan management - interlibrary loan borrowing and interlibrary loan lending
- Focus for the presentation- interlibrary loan borrowing-process
- Books borrowed mainly from Libris Fjärrlån (the interlibrary loan module in the Swedish union catalogue Libris)
- Articles borrowed mainly from Libris and Subito

ÖREBRO UNIVERSITY

Örebro University

- 3 faculties, 8 schools, 85 degree programmes and 920 single courses
- 1,700 staff
- 16,000 students and 490 doctoral students
- 3 Campus - 2 in the city of Örebro and 1 in Grythyttan

Örebro University Library

- 3 staffed libraries and 1 unstaffed
- 247,770 printed and 232,061 electronic books, 215 print and 14,500 electronic journals
- 773 study places, around 350,000 visitors a year
- 38 staff (whole library)
- Staff - Interlibrary loan department (whole library). 7 staff in total 3 full time
- Interlibrary loans (2021): Lending: 3,149 loans and non-returnables. Borrowing: 914 loans and non-returnables

The Library System Alma

- Developed and managed by Ex Libris
- Integrated system - whole suit of library operations (election, acquisition, print management, electronic management, metadata management, link resolution, digitization, fulfillment and discovery)
- Provided by subscription as a cloud-based solution
- Managing User Roles and Workflows

From Voyager to Alma

- Before Alma the library system Voyager was used. Seperate systems were used for interlibrary loan (Saga and Gill)
- Procurement through the consortium GSLG
- Reasons for procurement of new Library system
 - Decline of development and new features
 - System-hosted server was approaching end-of-life
 - Lacking support for e-resource management

Procurement – selection process

- Public tender. Both quality and costs taken in consideration.
- Requirements included:
 - All functionalities covered with all workflows for all resources
 - Available support
 - Interlibrary loan- integration with Libris and workflow integration with all the other parts in the system
- Decided for an Alma/Primo solution which went live 2017

Karlstad University

Quick facts (2021)

- 19,000 students and 265 doctoral students
- 1,334 staff (28 at the library)
- 75 programs and 750 courses
- 139,099 printed books, 397,776 electronic books, 195 print journals and 13,607 electronic journals
- 1,488 study places and around 18,745 visitors a year
- Interlibrary loan department was lending 2,279 books and articles and borrowing 1,088
- 3 part time staff for interlibrary loan which makes 1 fulltime

The logo for Koha, featuring a stylized white 'K' on a green background, followed by the word 'koha' in a white, lowercase, serif font.

The Library System Koha

- Open source system
- Koha is a maori word and means present
- Swedish Koha user group is networking to help each other to develop the system
- Some of the university libraries working with the Koha system in Sweden are: Stockholms university library, Luleå university library, Lund university library, Göteborg university library and Karlstad university library which changed from the library system Sierra to Koha in january 2021

From Sierra to Koha

- Library system Millenium (later Sierra) owned by the American company Innovative
- 2019 pre-studies were done of a university project manager about going on with Sierra, to change to the library system Alma or to start with the open source system Koha
- The decision involved not only the costs but as well how the system can communicate with other systems we work with and what we think the system should provide to make our daily work as smooth as possible
- 2021 Karlstad University library went live with Koha

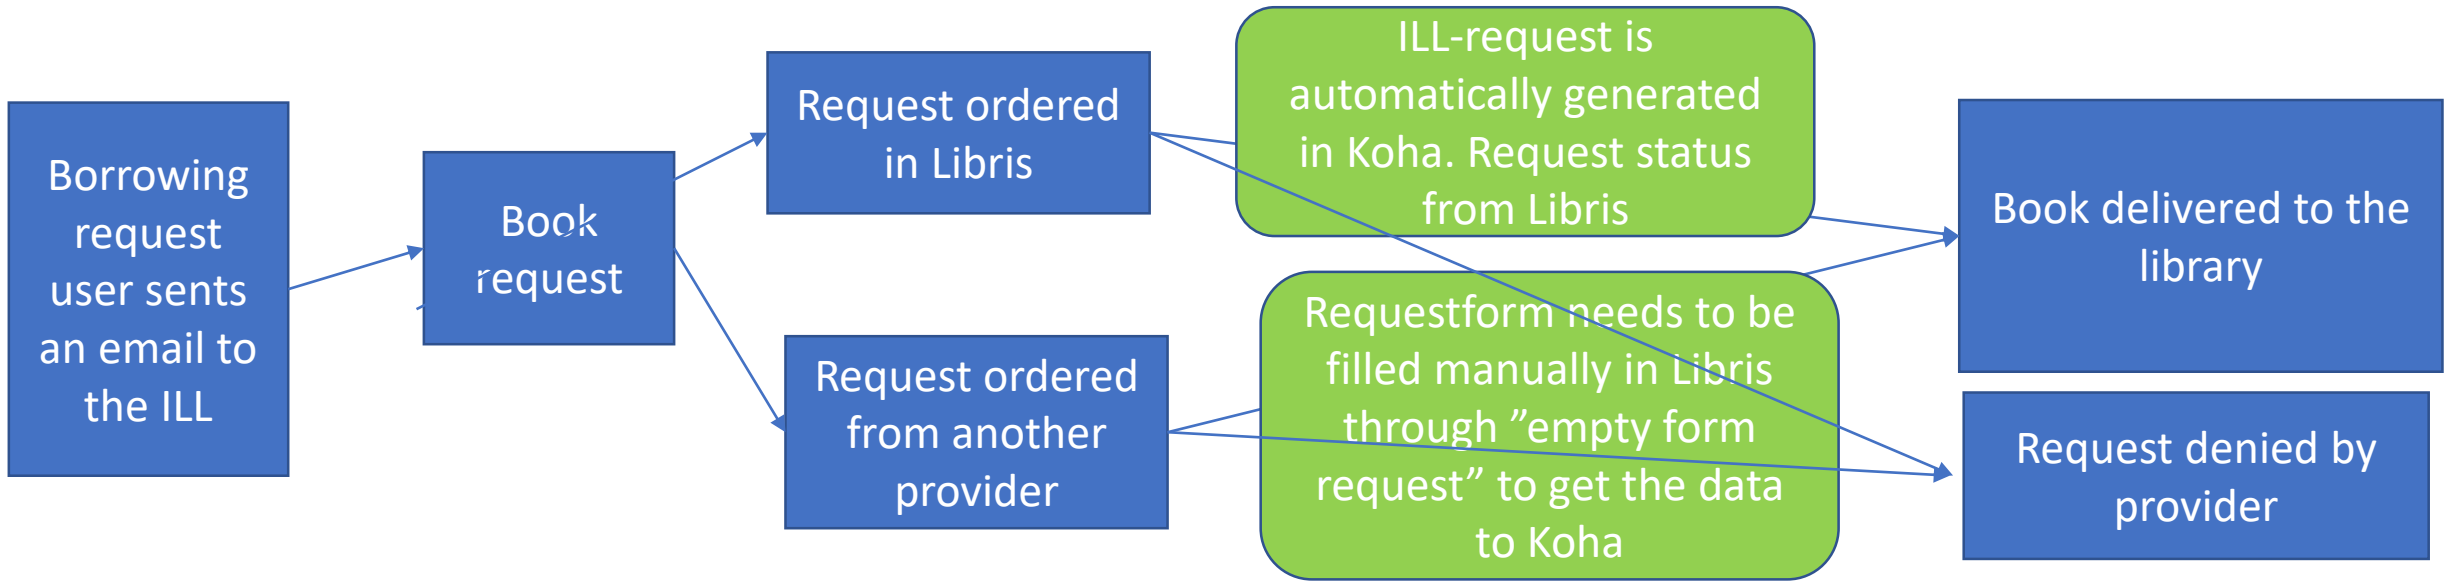

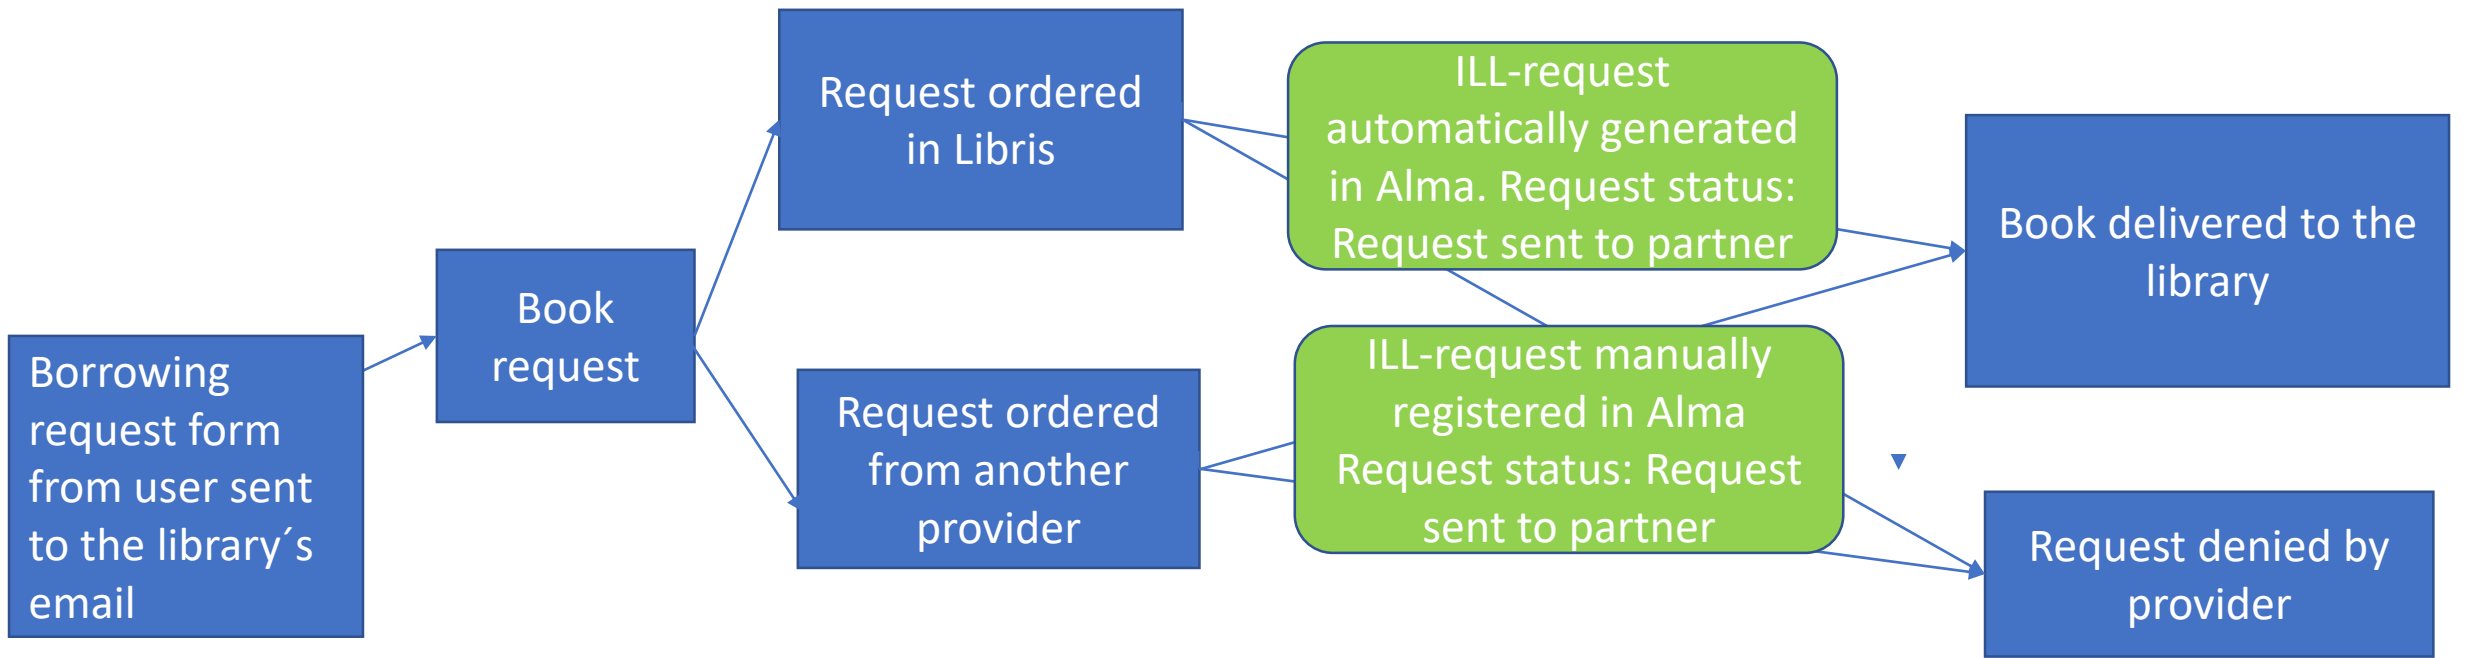

Alma-Koha Comparison

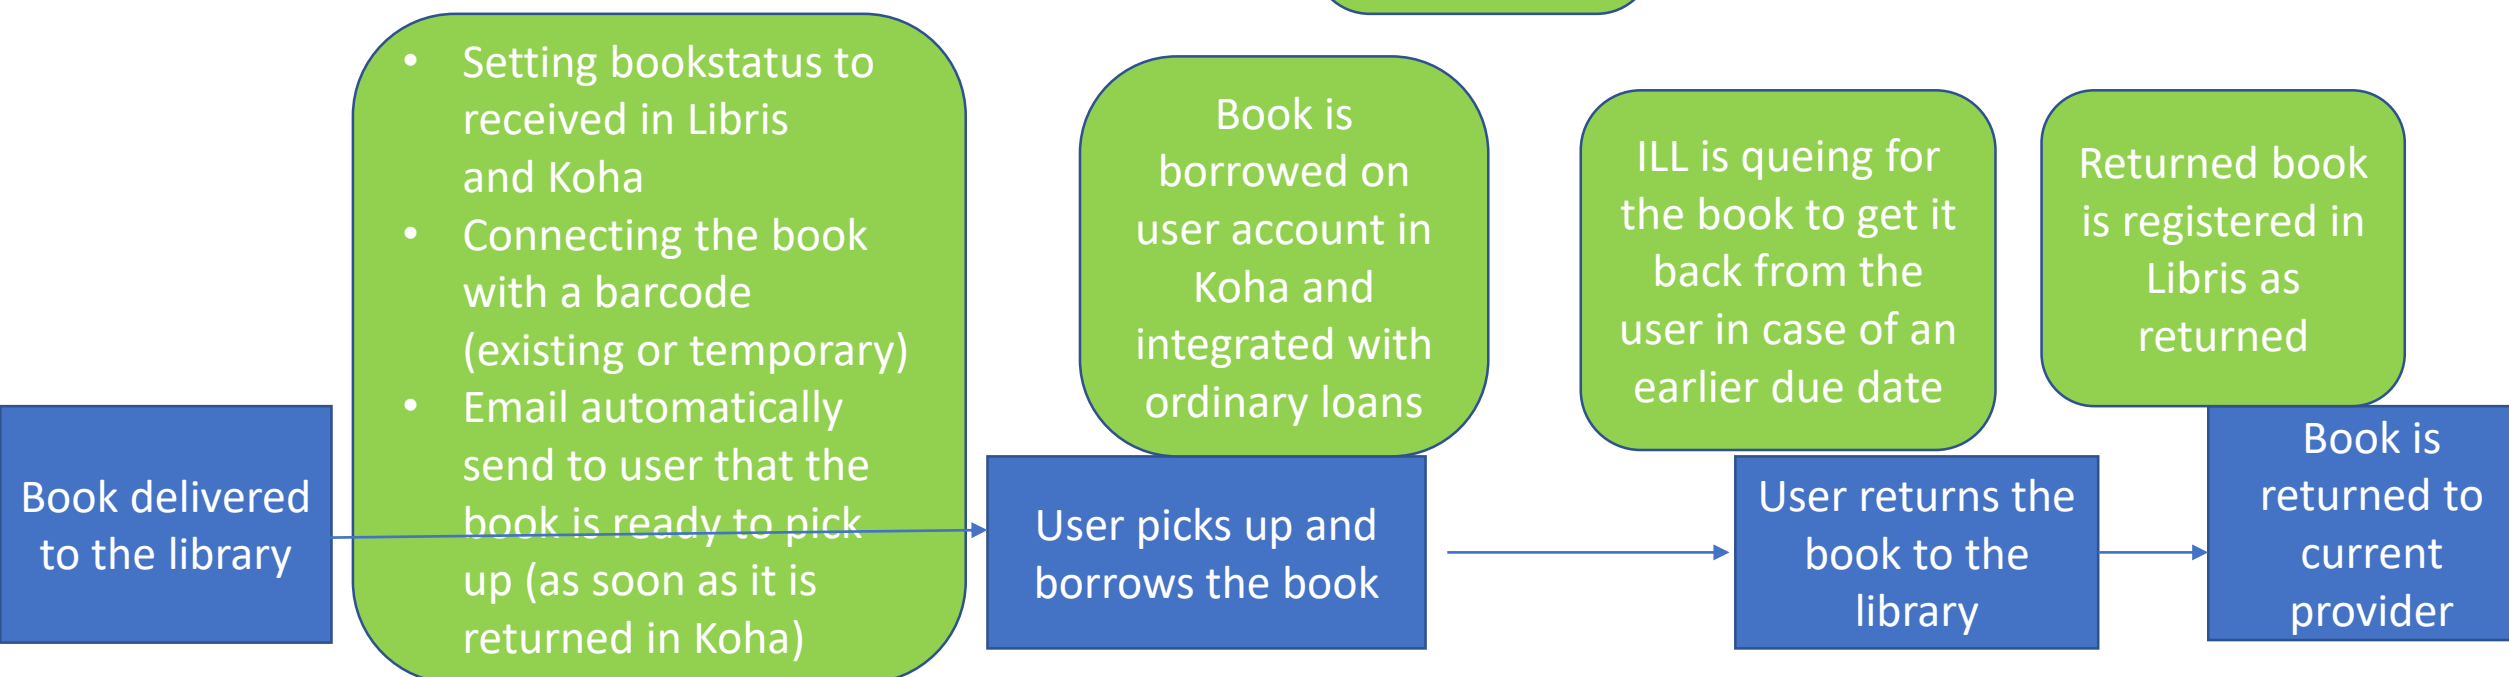

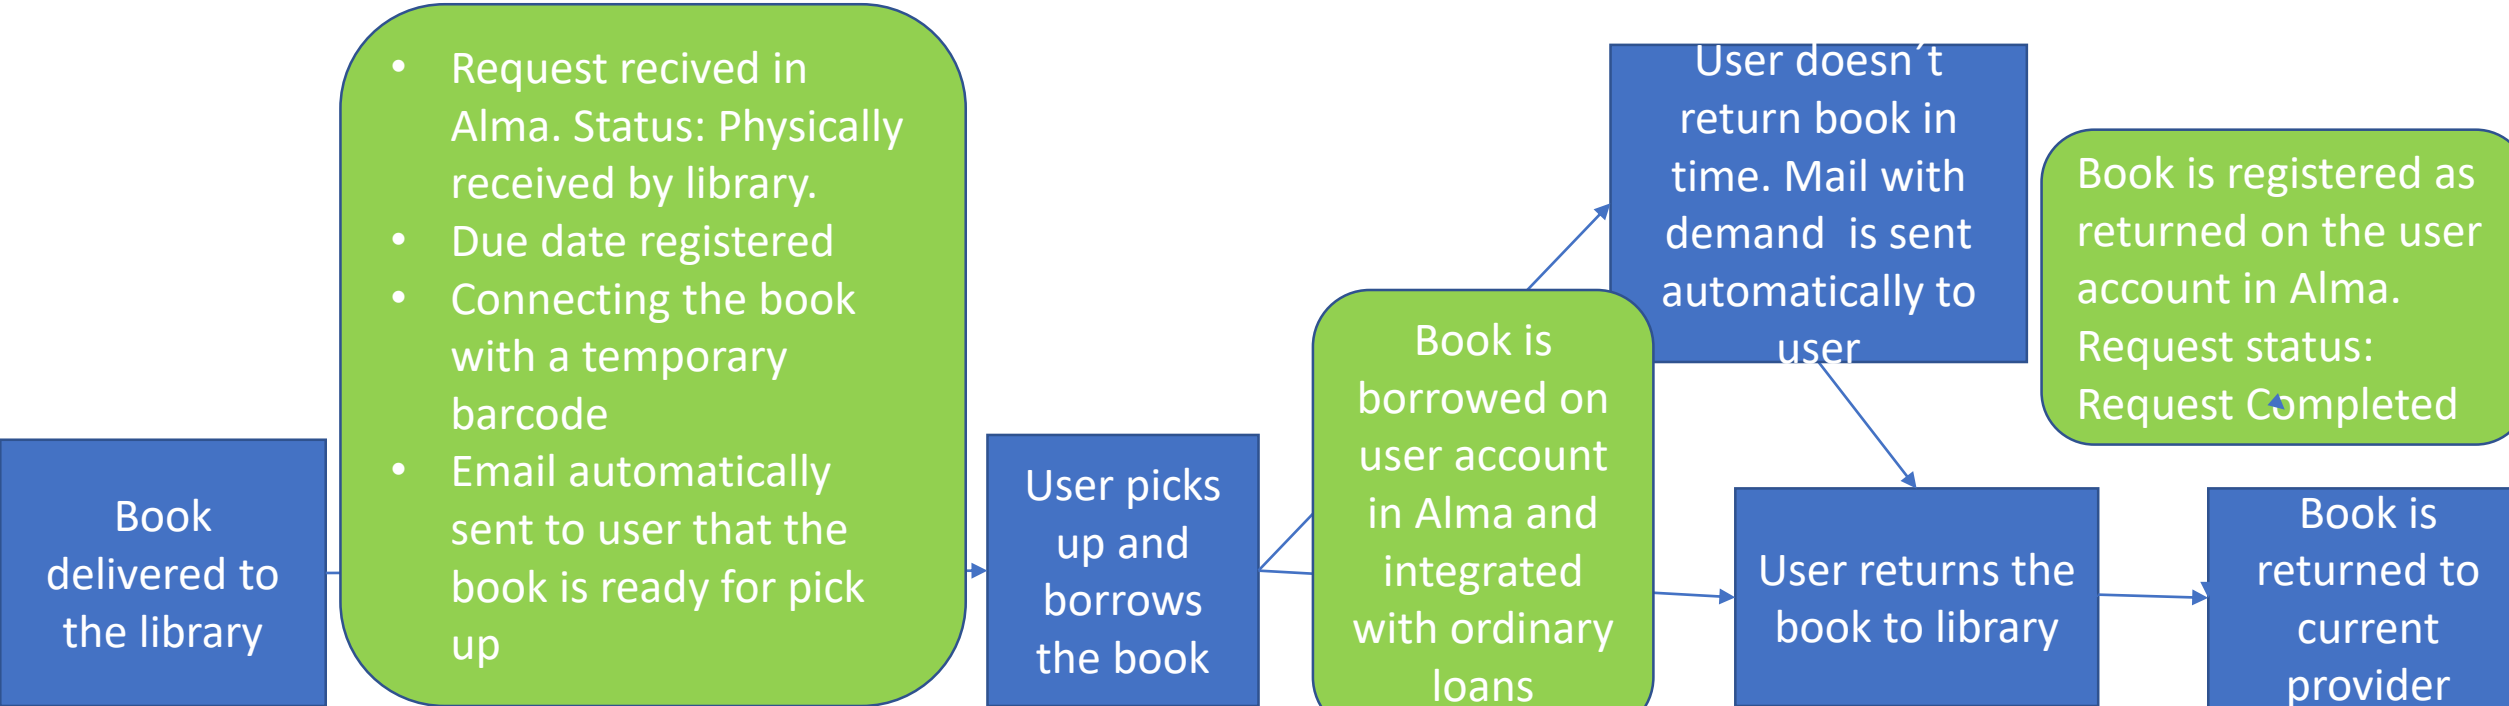

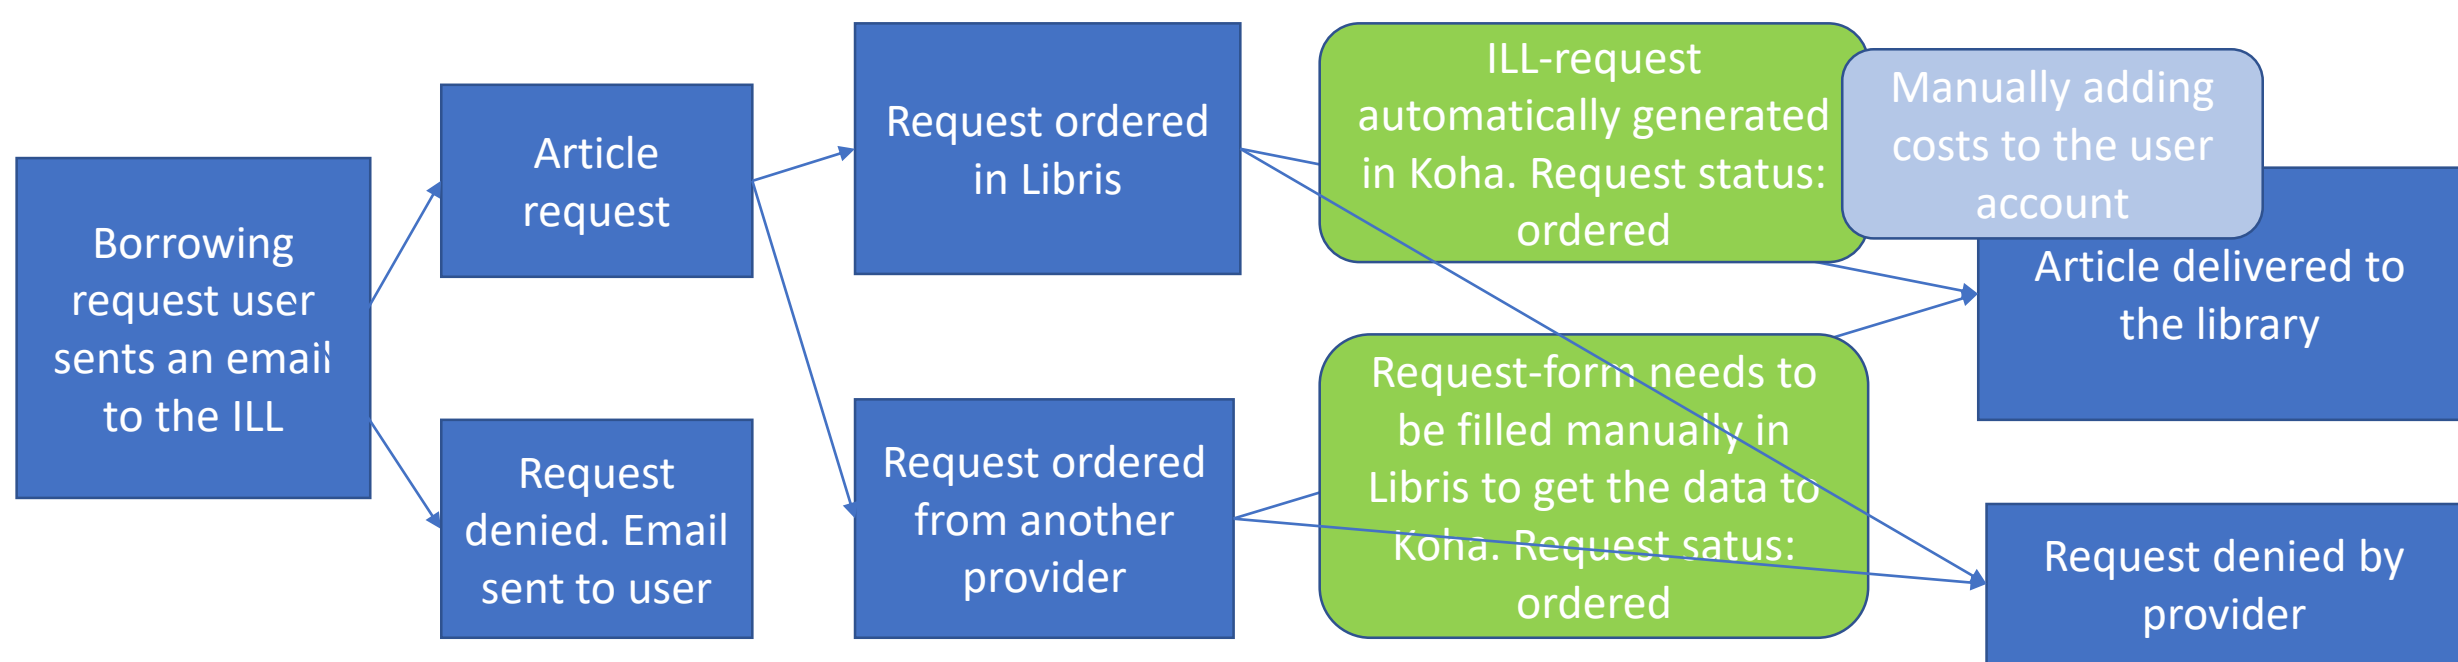

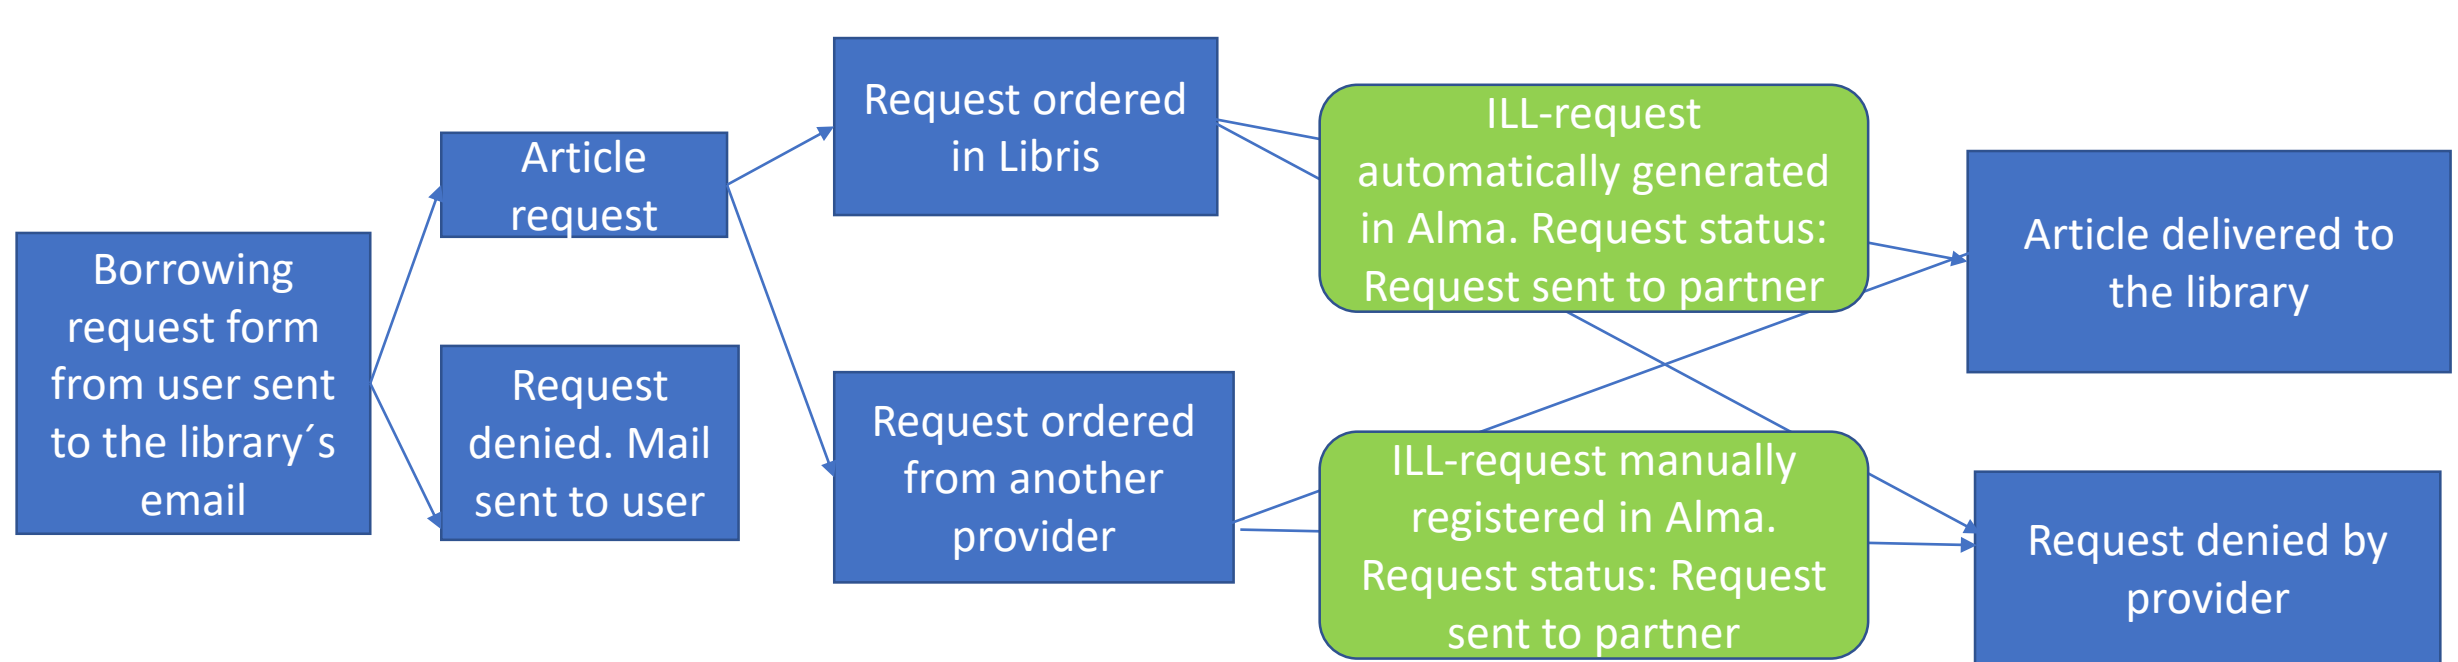

- Proprietary system (subscription via Ex Libris)
- Development, management and support by Ex Libris. Updates automatically via cloud-solution
- Advantage - saves time and resources for the library
- Disadvantages – dependency on the vendor. The library must adapt to the systems functions and solutions

- Open source system (free software)
- Opportunity to cooperate with others to develop the system
- Advantage – more control over the systems development
- Disadvantages – the cooperation can get tilted. No access to company support. Must develop own competence for development and management of the system or pay a consultant for it

Interlibrary loan workflows - comparison

- Circulation-process for interlibrary loans managed within the system
- Communication with users is possible through the system
- Integration with Libris

- Requests - webb-based forms
- The time to get records imported from Libris: every night)
- Manually registration (mainly articles) possible

- Requests – email
- The time to get records imported from Libris: every 15 minutes)
- Manually registration not possible. Registration in Libris by "empty form"

Workflow adjustments

First choice for books and articles

First choice for books and second for articles

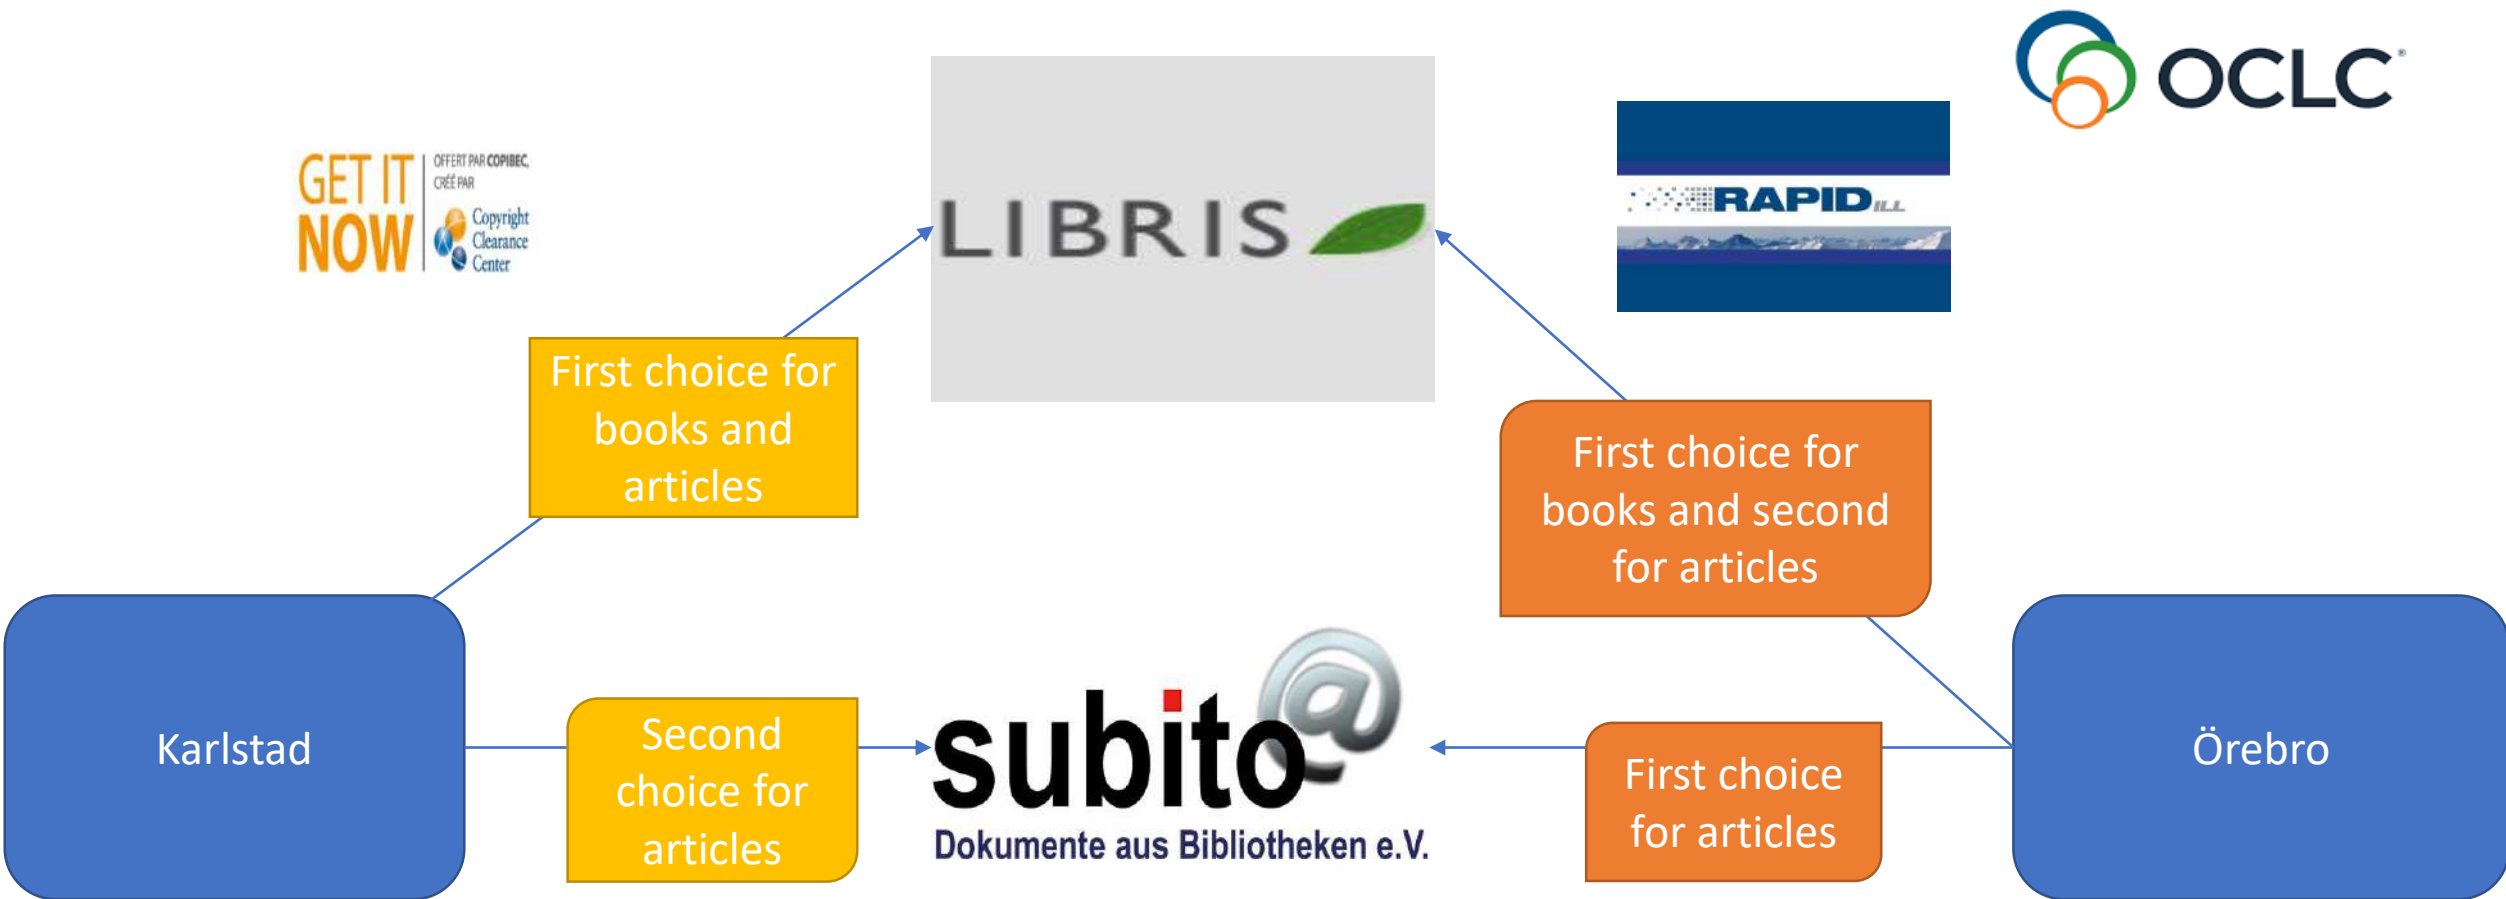

Karlstad

Second choice for articles

Örebro

Discussion and future work

- Discussion whether to integrate a request form or not
- Is it possible to connect Subito to Koha?
- Automatization of billing of articles for students and employees
- Better solution of claiming back interlibrary loan books
- Improvement of the system workflow after a book has been returned (automatically deleting catalogue posts when Libris status is returned)

- Exlibris RapidILL – interesting, possible, alternative to consider to improve the ILL workflow. The establishment in Sweden is awaited
- Existing features in Alma for the billing part - not a priority to activate for the moment as there is not much invoicing
